Mechanical Technician – Job Description

The post is for a Mechanical Technician to work as part of the mechanical engineering team within the TQC project team structure supporting Project Engineer through all phases of a project from conception to commissioning. The Mechanical Technician will be directly responsible to the Mechanical Project Engineer for the current project and ultimately responsible to the Mechanical Engineering Manager.

Duties will include:

1. Using lathes, milling machines etc., and an understanding of, and the ability to work within the relevant Health and Safety legislation.
2. Reading detail and assembly drawings and schematics.
3. Using measuring equipment and instrumentation
4. Assembly of TQC's products from documentation issued and guidance from engineers.
5. Working with minimum supervision.
6. PC use for various associated tasks
7. Visit a customer's site to service equipment or diagnose faults.

For the Apprentice Role the same level of duties will be required but on the job training will be included.
