Project Engineer (Mechanical) – Job Description

The post is a Project Engineer role that forms a critical part of the mechanical engineering team within the TQC project team structure. The Project Engineer will be directly responsible to the Mechanical Engineering Manager but will often work under the coordination of a Project Manager for each particular project.

Duties will include:

1. Contribute to the management of the projects currently involved with.
2. Supporting our engineers through all aspects of the project from conception to completion
3. 3D CAD design and detailing.
4. Generating and maintaining parts lists and drawing records.
5. Supporting the manufacturing and build phase of the project.
6. Generate project documentation for both internal and external use (eg. Operator Manuals)
7. Visits to customer's site to support equipment or diagnose faults.
